DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1, and 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Auinger (U. S. Pat. 3,979,618) in view of Andrey (U. S. Pat. 5,723,931).

Auinger discloses a 3-phase synchronous machine comprising:

a stator, the stator is formed with nine slots for receiving for each of the 3 phases a two-layer winding with a pitch factor of 7/9 and made of 3 consecutively arranged prefabricated coils, with each coil having a width of two slot pitches (column 4, lines 9-23). Auinger discloses that each slot defines a slot gap and a slot width, wherein a width of the slot gap is at least half of the slot width (figures 2).

However, Auinger does not disclose that the rotor has an outer circumference and includes permanent magnets, which are arranged on the outer circumference of the rotor. Auinger does not disclose that the permanent magnets are arranged interiorly of the rotor.

Andrey discloses that the rotor (1601 in figure 16) has an outer circumference and includes permanent magnets (1602), which are arranged on the outer

circumference of the rotor (1601). Andrey discloses that the permanent magnets (1802 in figure 18) are arranged interiorly of the rotor (1801). Andrey's invention has the purpose of reducing ratcheting in the motor at lower speeds in both inner and outer type of permanent magnet rotor motor.

It would have been obvious at the time the invention was made to modify the machine of Auinger and provide it with the rotor configuration disclosed by Andrey for the purpose of reducing ratcheting in the motor at lower speeds in both inner and outer type of permanent magnet rotor motor.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the windings with the specified pitch factor since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the windings with the specified slot dimensions since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Response to Arguments

Applicant's arguments with respect to claims 1 and 4-6 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
